

# Advanced Artificial Intelligence (EE7260)

DEPARTMENT OF ELECTRICAL AND INFORMATION ENGINEERING  
UNIVERSITY OF RUHUNA

Sanjaya Edirisinghe

[Sanjaya@professional.mit.edu](mailto:Sanjaya@professional.mit.edu)

[Sanjaya@bu.edu](mailto:Sanjaya@bu.edu)

<b>Code</b>	EE 72xx	<b>Title</b>	<b>Advanced Artificial Intelligence</b>		
<b>Credits</b>	2.0	<b>Lecture Hours/Semester</b>	20 Hr	<b>Core/TE/GE</b>	TE
		<b>Workshop Hours/Semester</b>	16 Hr		
<b>GPA/NGPA</b>	GPA			<b>Pre-requisites</b>	EE5253, EE6350
<b>Aim</b>		The aim is to equip students with advanced knowledge and practical skills in advanced artificial intelligence techniques, with a particular focus on natural language processing, generative models, and AI system deployment.			
<b>Learning Outcomes</b>		Upon successful completion of this module, students will be able to:  LO-1      Preprocess raw text data by applying NLP techniques and generate feature representations and word embeddings  LO-2      Design and implement transformer-based models for an NLP task and create effective prompts for few-shot and zero-shot learning  LO-3      Build and evaluate a Variational Autoencoder and a Generative Adversarial Network to solve a defined task with measurable performance metrics  LO-4      Create a fully functional AI pipeline that includes preprocessing, modelling, and deployment for a real-world scenario			

# Bio

- Head of Delivery - Enterprise Applications – Virtusa
- Director of Delivery (IT) – Virtusa
- Sr. Program Manager – Cognizant
- Technical Program Manager/Director for various clients

- Boston University – MSc (AI & ML)
- University of Peradeniya, Faculty of Computer Engineering - BSc
- Massachusetts Institute Technology (MIT) – PgDip

- Sanjaya@professional.mit.edu
- SanjayaE@bu.edu

# Course Structure

## **Section 1:**

Text Preprocessing  
and Representation

## **Section 2:**

Word Embeddings

## **Section 3:**

Transformer  
Architecture

## **Section 4:**

Applications of  
Transformers and  
LLMs ( LLM Fine Tune)

## **Section 6:**

Autoencoders and  
Variants

**Section 7:** Generative  
Adversarial Networks  
(GANs)

## **Section 5:**

Prompt Engineering

**Section 8-10:** MLOps  
(Overview, Pipelines,  
Scaling)

---

**Why AI ?**

**Data > Value**

Time (Speed)

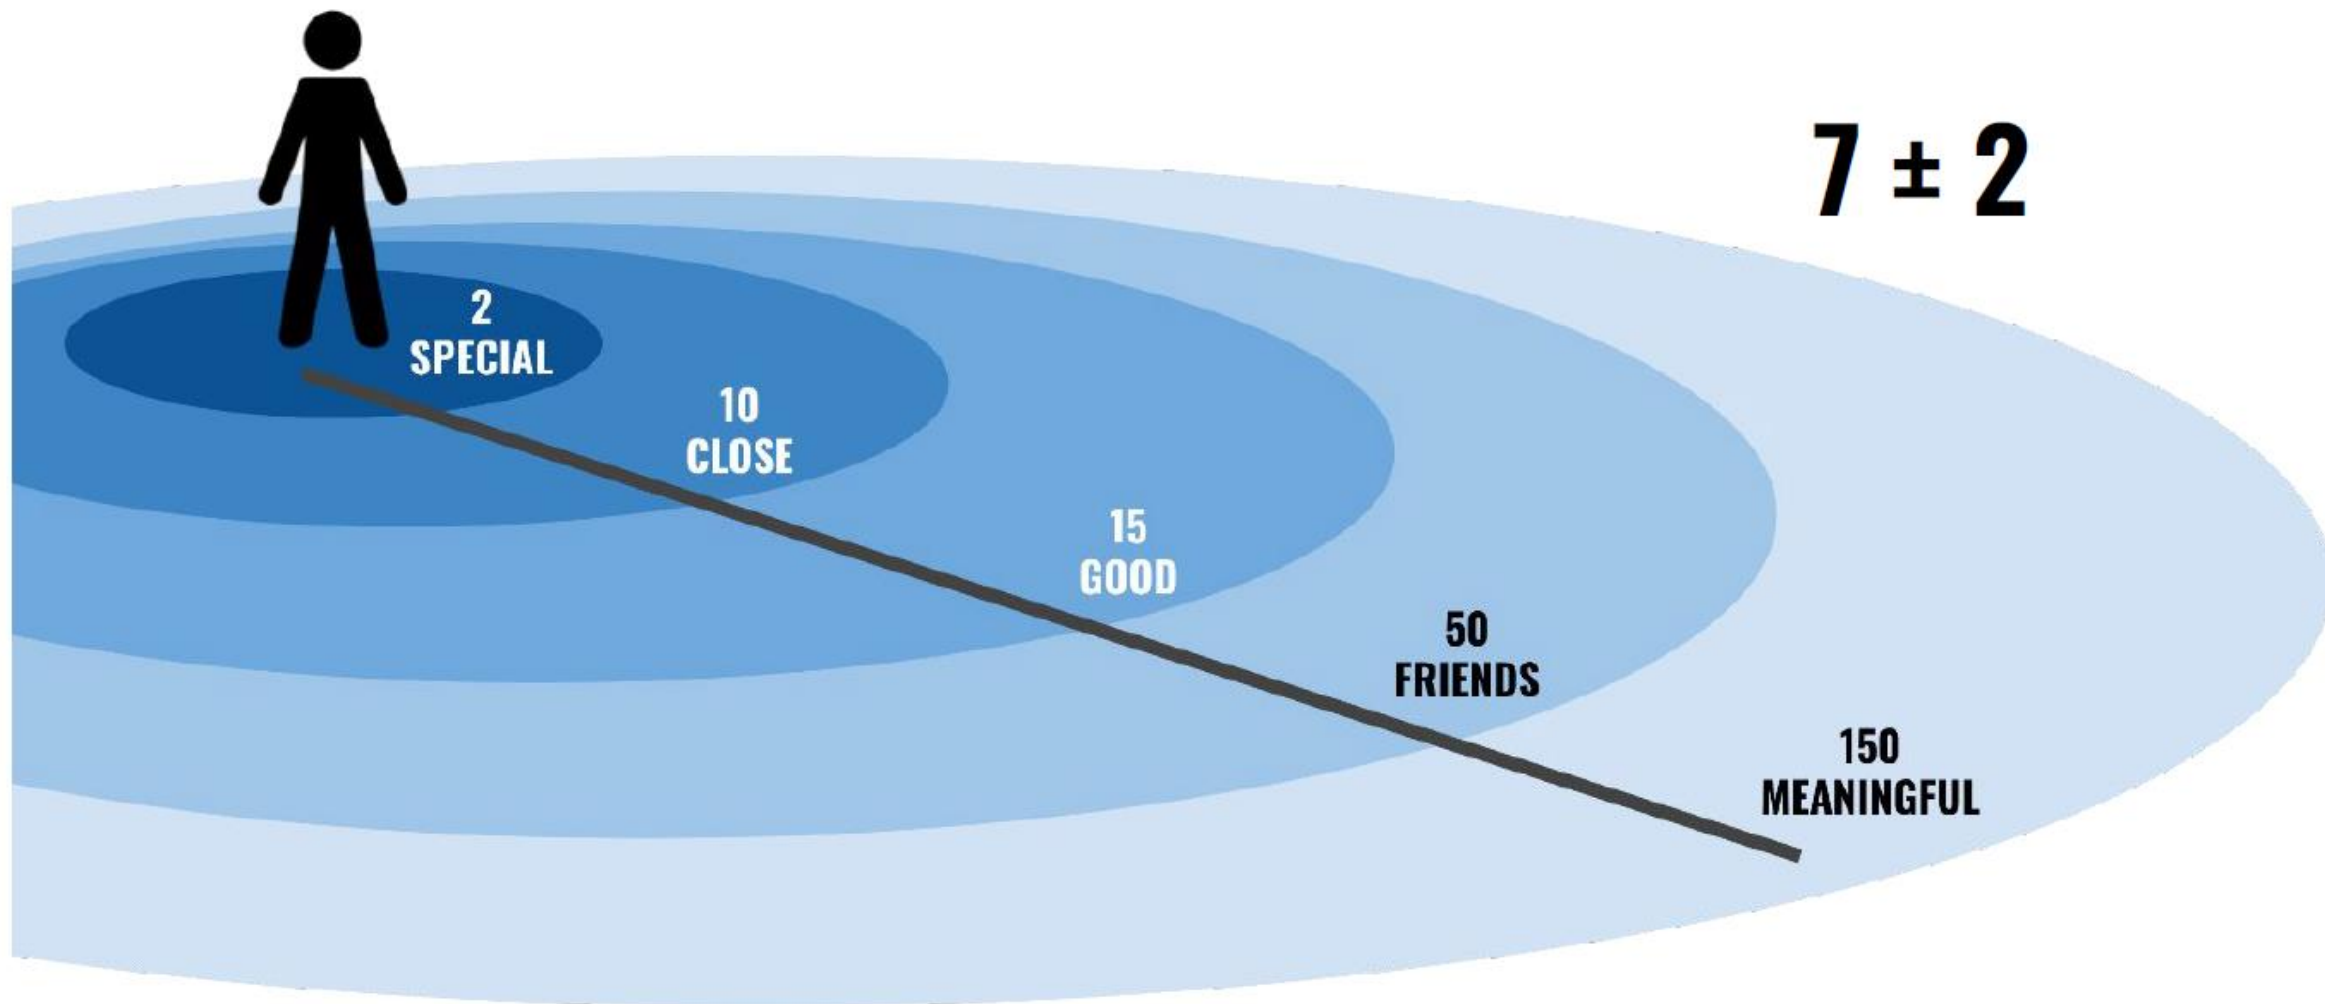

AI (Accelerator)

# DIKW Pyramid of Data (Science)

# Human Limitations

PROFESSIONAL EDUCATION  
Digital Plus® Programs

**We used to collect  
data by hand**

We used to process it  
by hand

# Herman Hollerith, The Tabulator, 1894 – First data company

COMPUTING  
DIVISION  
COMPUTING  
SECTION

**1920s, human layers  
of integration**

# 1940s, automation, manual programming

# 1960s, capturing instructions

## *Generative A.I. Can Add \$4.4 Trillion in Value to Global Economy, Study Says*

The report from McKinsey comes as a debate rages over the potential economic effects of A.I.-powered chatbots on labor and the economy.

# Research Areas for (Gen) AI field

## **Effectiveness**

- Reasoning Capabilities (Decision making with logical reasoning)
- Meaningful context (Context awareness, long-range dependencies)
- Explainable AI (Transparency)

## **Efficiency improvement:**

- More efficient AI architecture (Low watt per token)
- “The bigger the better!” should not be true for model training and constriction of foundation models
- Training models with small number of data sets
- Multi-modal capabilities
- Agentic AI
